

**ABSTRACT**

A computer assisted method, comprising steps of having a geographic location information, at least one demand parameter and a demand area definition parameter derived from a multiplicity of demand client computers.

- 5 Storing said geographic location information, said demand parameters and said demand area definition parameter on a host server. Having a geographic location information, at least one supply parameter and a supply area definition parameter derived from a multiplicity of supply client computers.

- 10 Geographic location information said supply parameters and said supply area definition parameter are stored on a host server.

Searching matching supply parameters fulfilling said demand parameter within said demand area and delivering said supply parameters with optional location information, optional additional information and a contact means for each demand client computer by said host server.

- 15 Searching matching demand parameters fulfilling said supply parameter within said supply area and delivering said demand parameters with optional location information optional additional information and a contact means for each supply client computer by said host server.
